

Content Analyst's integrates 64-bit dtSearch® Engine in New Text Analytics Software Platform

Content Analyst Company, a leader in advanced text analysis software for the document management, legal, and intelligence communities, and dtSearch Corp., a leading supplier of enterprise and developer text retrieval software, announce the integration of the dtSearch Text Retrieval Engine into Version 3.3 of CAAT (the Content Analyst Analytical Technology platform). The new release embeds the native 64-bit dtSearch Engine for cross-platform Windows/Linux full-text searching. The release also introduces cross-lingual categorization, a SharePoint connector, and other data filtering enhancements.

Cross-lingual categorization. CAAT 3.3 supports cross-lingual categorization – a first in the industry - offering automated organization of mixed language document collections. CAAT 3.3 also provides users with an innovative categorization “self-test”. The “self-test” automatically analyzes the quality of the examples and enables users to easily fine-tune how CAAT categorizes large document collections.

SharePoint and other data sources. The new SharePoint connector allows CAAT 3.3 users to ingest and intelligently analyze and search the vast stores of unstructured information in SharePoint repositories. New optional filters include an innovative OCR filter to help remove noise and improve search results from scanned documents, as well as email filters to programmatically deal with the redundant information contained in many header and footer fields.

64-bit dtSearch functionality. CAAT 3.3 embeds new 64-bit builds of both the dtSearch Engine for Win & .NET and the dtSearch Engine for Linux. CAAT 3.3 also provides enhanced export capabilities of data for compatibility with the many other dtSearch-Engine embedding applications, including those in the e-discovery and forensics arenas.

dtSearch products can index over a terabyte of data in a single index – as well as create and instantly search an unlimited number of indexes. The software offers over two dozen search options, including Unicode support covering hundreds of international languages. Proprietary file format support provides for highlighting hits in all popular file types. A built-in Spider supports searching of local and remote, public and secure, dynamic and static web data, with WYSIWYG hit-highlighted display of web-ready data. The dtSearch Engine API support includes .NET, Java, C++ and SQL in native 64-bit Windows and Linux versions.

About Content Analyst Company

Headquartered in Reston, Virginia, Content Analyst® is a leader of advanced search tools and technology. Content Analyst's software includes patented Latent Semantic Indexing (LSI) technology, this provides advanced, conceptual-based search and document analysis for a wide range of customers, from highly-classified intelligence installations to world-class publishers to cutting-edge eDiscovery providers. For all these customers, CAAT exponentially reduces the time needed to discern relevant information from large volumes of information. CAAT was recently voted one of KMWorld's Trend Setting Products of 2008. www.contentanalyst.com (info@contentanalyst.com)

About dtSearch

The Smart Choice for Text Retrieval® since 1991, dtSearch offers 17 years of experience in text search. The dtSearch product line includes enterprise and developer text search products, meeting some of the largest-capacity text retrieval needs in the world. www.dtsearch.com
